In re Appln of: MELLER ET AL **Atty. Docket No.:** LIP039
Title: SEALING RING AND SEALING RING ARRANGEMENT
Serial No.: 10/801,095
Filed: MARCH 15, 2004

Commissioner for Patents
PO Box 1450
Alexandria, VA 22313-1450

Sir:

INFORMATION DISCLOSURE STATEMENT

The references listed on the attached form PTO-1449 relate to the subject matter of the present invention and are brought to the attention of the Patent and Trademark Office pursuant to 37 C.F.R. 1.56 and 1.98.

WO 03/044354 A1 and DE 24 05 176 B2 are not in the English language. By way of a brief description of the reference, an English language abstract for WO 03/044354 A1 is enclosed. DE 24 05 176 B2 corresponds to US 3,895,815, which is in the English language. A copy of US 3,895,815 is enclosed.

DE 43 41 386 A1 is not in the English language. DE 43 41 386 A1 corresponds to European patent application EP 663 548. The English language abstract for EP 663 548 is enclosed. Additionally, it discloses the supporting spring 9, 14 may be arranged in the annular groove pressing the piston ring 7 axially against the conical groove flank 5. Alternatively, the ring may be designed tensionless. According to a further embodiment, at the groove flank 5 a second ring 12 having a corresponding flank can be arranged. One of the rings, 7, 12 can be tensioned inwardly. A supporting spring 14 being under radial inwardly tension may be arranged

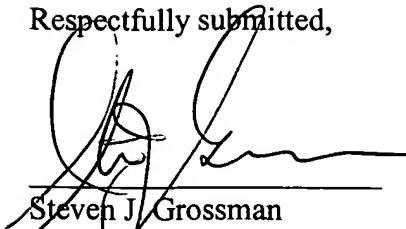

axially between the first and the second piston ring 7, 12.

DE 199 53 384 C1 is not in the English language. It corresponds to EP 1098082. A limited translation is that it discloses a piston of a combustion engine which is designed to withstand high thermal conditions. The piston is provided with a piston ring zone 1 having ring grooves 2a, 2b to receive rings for wiping oil (grooves 2b, 2c) or to receive a compression ring (groove 2a). In order to provide a piston having an improved cooling in the area of the piston bottom and the piston rings and having a reduced weight, the outer cooling recesses 20 have a conical shape, whereby the outer cooling recesses 20 are inclined inwardly with respect to the piston axis 5 and taper with increasing distance to the corresponding hub 11 towards the combustion area 3, whereby the outer cooling recesses 20 are transformed into an inner cooling recess 21 being open inwardly and downwardly.

This statement is being submitted prior to a first office action on the merits. While this statement contains all the relevant information presently known to the applicant, it should not be interpreted as a representation that an exhaustive search has been conducted or that no other relevant information exists. Also, this statement should not be interpreted as a representation that any cited reference is prior art, or that any cited reference is "material to patentability" as defined in 37 CFR §1.56. The applicant invites the Examiner to make an independent evaluation of each cited reference, copies of which are enclosed, to determine their relevance to the subject matter of the present application.

Finally, the applicant urges that the claims are patentable over the disclosed information.

Respectfully submitted,

Steven J. Grossman
